| Project Title: SeBenarnya.my Independent Verification and Validation |                                               | SeBenarnya.my<br> |
| Date: 4 January 2026                                                 | Test Incident Report ID: SeBenarnya_TIR_1.0.0 |                                                                                                      |

|                                     |                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Test Data:                          | Mixed-language news content (English–Malay combination); “Today kerajaan announced a new education policy.”                                                                                                                                                                                                                                                               |
| Expected Result:                    | The system should route detected language content to the appropriate language-specific classifier without noticeable delay.                                                                                                                                                                                                                                               |
| Actual Result                       | The system experiences a significant routing delay before forwarding the content to the appropriate classifier.                                                                                                                                                                                                                                                           |
| Unexpected Outcome:                 | None                                                                                                                                                                                                                                                                                                                                                                      |
| Procedure to reproduce the incident | <ol style="list-style-type: none"> <li>1. User submits mixed-language (English–Malay) news content.</li> <li>2. System completes language detection with confidence <math>\geq 70\%</math>.</li> <li>3. System attempts to route content to the appropriate classifier.</li> <li>4. Routing process experiences noticeable delay before classification begins.</li> </ol> |
| Test Environment                    | <ul style="list-style-type: none"> <li>• Web-based system</li> <li>• Normal network conditions</li> </ul>                                                                                                                                                                                                                                                                 |

|                                                                      |                                               |                                                                    |

| Date: 4 January 2026                                                 | Test Incident Report ID: SeBenarnya_TIR_1.0.0 |                                                                                                                              |

|                                     |                                                                                                                                                                                                                                                                                                                          |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Test Procedure:                     | TP-04-001                                                                                                                                                                                                                                                                                                                |
| Test Data:                          | Mandarin news content containing technical terminology translated into English.                                                                                                                                                                                                                                          |
| Expected Result:                    | The system should generate a consistent and accurate translation quality score when validating Mandarin-to-English translations, including technical terms.                                                                                                                                                              |
| Actual Result                       | The system produces inconsistent translation quality scores for similar Mandarin-to-English translations containing technical terminology.                                                                                                                                                                               |
| Unexpected Outcome:                 | None                                                                                                                                                                                                                                                                                                                     |
| Procedure to reproduce the incident | <ol style="list-style-type: none"> <li>1. User submits Mandarin news content with technical terms.</li> <li>2. System translates content from Mandarin to English.</li> <li>3. System validates translation quality.</li> <li>4. Translation quality score varies inconsistently across repeated validations.</li> </ol> |
