1.0 Introduction

1.1 Purpose

This Procedure describes the steps necessary to perform the test specified in the test design specification for SeBenarnya. The procedure describes the execution of the test case described in Test Case Specification SeBenarnya_TCS_1.0.0.

1.2 Scope

The following features are covered in this procedure :

Function ID	Feature	Description	Accessible Role
F001	Multi-Language Detection	Detects the language of submitted news content, including Malay, English, and Mandarin, before further processing by the system.	Public User, Registered User, Fact-Checker, Admin
F002	Language Routing to Appropriate Classifier	Routes detected language content to the appropriate language-specific AI classifier to ensure accurate analysis and classification.	System (Automated), Fact-Checker, Admin
F003	Cross-Language Duplicate Detection	Identifies duplicate or semantically similar news content submitted in different	System (Automated), Fact-Checker, Admin

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

		languages to prevent misinformation repetition.	
F004	Translation Validation	Validates translated content to ensure meaning, intent, and factual accuracy are preserved prior to classification.	System (Automated), Fact-Checker, Admin
F005	AI-Based News Classification	Classifies submitted news content into categories such as True, False, Misleading, or Unverified using AI-based analysis.	Public User (View), Registered User, Fact-Checker, Admin
F006	Multi-Language Reporting	Generates and displays classification reports in the user's selected interface language.	Public User, Registered User, Fact-Checker, Admin
F007	User Submission	Allows registered users to submit news content, which is stored and linked to the correct user account profile.	Registered User
F008	Fact-Checker Verification Workflow	Enables fact-checkers to verify submissions, manage classification results, update	Fact-Checker, Admin

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

		reputation scores, and trigger alerts or warnings.

2.0 Test Procedure

2.1 Test Procedure (Multi-Language Detection – F001)

Prior to execution of the following test procedures, these special requirements must be prepared:

- i. MySebenarnya System must be in “On” state
- ii. MySebenarnya System must be in “Idle” state

Test Procedure ID	TP-01-001
Objective	Verify that the system correctly detects the language of submitted news content.
Test Cases to be Executed	TC-01-001, TC-01-002, TC-01-003, TC-01-004, TC-01-005, TC-01-006, TC-01-007, TC-01-008
Set up	1. User clicks the “Submit News” button. 2. User enters news content written in a single supported language (English, Malay, Mandarin). [TC-01-001][TC-01-002] 3. User enters mixed-language content for detection verification. [TC-01-003][TC-01-004] 4. User clicks the “Submit” button. 5. System analyzes the submitted content. 6. System automatically detects and identifies the language of the news content.

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

	7. System displays the detected language result to the system backend.
Wrap Up	1. User logs out from the system.

Table 2.1 Multi-Language Detection Test Procedure

2.2 Test Procedure (Multi-Language Detection – Incorrect / Exception Flow)

Test Procedure ID	TP-01-002
Objective	Verify system behavior when language detection input is invalid, unreadable, or unsupported.
Test Cases to be Executed	TTC-01-006, TC-01-007
Set up	1. User clicks “Submit News” button. 2. User enters unreadable or random character content. [TC-01-006] 3. User enters content in an unsupported language. [TC-01-007] 4. User clicks “Submit” button. 5. System fails to detect a valid language. 6. System displays error or fallback message such as “<i>Unable to detect language</i>”.

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

	7. System logs the detection failure.
Wrap Up	1. Tester verifies error handling behavior.

Table 2.2 Multi-Language Detection – Exception Flow Test Procedure

2.3 Test Procedure (Language Routing to Appropriate Classifier – F002)

Prior to execution of the following test procedures, these special requirements must be prepared:

- i. MySebenarnya System must be in “On” state
- ii. MySebenarnya System must be in “Idle” state

Test Procedure ID	TP-02-001
Objective	Verify that detected languages are routed to the correct AI classifier.
Test Cases to be Executed	TC-02-001, TC-02-002, TC-02-003, TC-02-004, TC-02-005, TC-02-006, TC-02-007

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

Set up	1. User submits news content via “Submit News” button. 2. System detects the language of the submitted content. 3. System routes English content to English classifier. [TC-02-001] 4. System routes Malay content to Malay classifier. [TC-02-002] 5. System routes Mandarin content to Mandarin classifier. [TC-02-003] 6. System routes mixed-language content to appropriate classifier pipeline. [TC-02-006] 7. System displays classification output.
Wrap Up	1. Tester verifies correct routing result. 2. Any routing delay or anomaly is recorded in Test Incident Report.

Table 2.3 Multi-Language Detection – Exception Flow Test Procedure

2.4 Test Procedure ((Language Routing – Incorrect / Exception Flow)

Test Procedure ID	TP-02-002
Objective	Verify system response when language routing fails or is delayed.

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

Test Cases to be Executed	TC-02-006
Set up	1. User submits mixed-language news content. 2. System detects multiple languages in the same submission. 3. System attempts to route content to classifiers. 4. System experiences routing delay or ambiguity. [TC-02-006] 5. System flags the content for further processing. 6. System logs routing delay for administrator review.
Wrap Up	1. Tester confirms routing anomaly is recorded in Test Incident Report.

Table 2.4 Language Routing – Exception Flow Test Procedure

2.5 Test Procedure (Cross-Language Duplicate Detection – F003)

Prior to execution of the following test procedures, these special requirements must be prepared:

- MySebenarnya System must be in “On” state
- MySebenarnya System must be in “Idle” state

Test Procedure ID	TP-03-001
--------------------------	-----------

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

Objective	Verify detection of duplicate news content across different languages.
Test Cases to be Executed	TC-03-001, TC-03-002, TC-03-003, TC-03-004, TC-03-005, TC-03-006, TC-03-007
Set up	1. User submits an original news article. 2. User submits translated or paraphrased version of the same news in another language. [TC-03-001] 3. System compares new submission with existing content. 4. System detects cross-language similarity. 5. System flags duplicate content. 6. System logs the duplicate detection result.
Wrap Up	1. Tester verifies duplicate detection accuracy.

Table 2.5 Cross-Language Duplicate Detection Test Procedure

2.6 Test Procedure (Cross-Language Duplicate Detection – Incorrect / Exception Flow)

Test Procedure ID	TP-03-002
Objective	Verify behavior when duplicate detection confidence is inconclusive.

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

Test Cases to be Executed	TC-03-004, TC-03-006
Set up	1. User submits loosely paraphrased news content in another language. 2. System compares content similarity. 3. Similarity score falls below duplication threshold. 4. System fails to confidently detect duplication. 5. System marks content as “<i>Potential Duplicate</i>”. 6. System logs the uncertainty for manual review.
Wrap Up	1. Tester verifies uncertainty handling behavior.

Table 2.6 Cross-Language Duplicate Detection – Exception Flow Test Procedure

2.7 Test Procedure (Translation Validation – F004)

Prior to execution of the following test procedures, these special requirements must be prepared:

- MySebenarnya System must be in “On” state
- MySebenarnya System must be in “Idle” state

Test Procedure ID	TP-04-001
Objective	Verify accuracy and consistency of translated news content.

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

Test Cases to be Executed	TC-04-001, TC-04-002, TC-04-003, TC-04-004, TC-04-005, TC-04-006, TC-04-007, TC-04-008
Set up	1. User submits news content in a foreign language. 2. System performs automated translation. 3. System validates translation accuracy. [TC-04-001][TC-04-002] 4. System calculates translation quality score. 5. System displays translation output. 6. System logs translation inconsistencies if detected. [TC-04-008]
Wrap Up	1. Tester reviews translation quality result. 2. Any inconsistency is recorded in Test Incident Report.

Table 2.7 Translation Validation Test Procedure

2.8 Test Procedure (Translation Validation – Incorrect / Exception Flow)

Test Procedure ID	TP-04-002
Objective	Verify system response when translation quality score is inconsistent or unreliable.

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

Test Cases to be Executed	TC-04-008
Set up	1. User submits Mandarin news content containing technical terms. 2. System performs translation to English. 3. System calculates translation quality score. 4. Translation quality score shows inconsistency. [TC-04-008] 5. System flags translation for review. 6. System logs inconsistency in Test Incident Report.
Wrap Up	1. Tester verifies translation anomaly is recorded.

Table 2.8 Translation Validation – Exception Flow Test Procedure

2.9 Test Procedure (AI-Based News Classification - F005)

Prior to execution of the following test procedures, these special requirements must be prepared:

- MySebenarnya System must be in “On” state
- MySebenarnya System must be in “Idle” state

Test Procedure ID	TP-05-001
--------------------------	-----------

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

Objective	Verify AI-Based News Classification with valid and complex news content.
Test Cases to be Executed	TC-01-001, TC-01-002, TC-01-003, TC-01-004, TC-01-005, TC-01-006, TC-01-007, TC-01-008
Set up	8. User clicks “Submit News” button. 9. User enters valid readable news content in the News Content field. [TC-01-001] [TC-01-003] [TC-01-007] 10. User clicks the “Submit” button. 11. System performs AI-based classification on the submitted news content. 12. System displays the classification result (True, False, Misleading, or Unverified). 13. System displays Explainable AI output for the classification. [TC-01-004] [TC-01-008] 14. System displays confidence score to Admin and Fact-Checker only. [TC-01-005] 15. Fact-checker reviews and updates the classification if required. [TC-01-002]
Wrap Up	2. User logs out from the system.

Table 2.9 AI-Based News Classification – Main Flow Test Procedure

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

2.10 Test Procedure (AI-Based News Classification - Incorrect / Exception Flow)

Test Procedure ID	TP-05-002
Objective	Verify AI-Based News Classification with invalid, manipulated, or adversarial news content.
Test Cases to be Executed	TC-01-003, TC-01-006, TC-01-007
Set up	8. User clicks “Submit News” button. 9. User enters rephrased or adversarially manipulated fake news content in the News Content field. [TC-01-003] [TC-01-006] 10. User clicks the “Submit” button. 11. System performs AI-based classification on the submitted content. 12. System flags the content as Suspicious or Unverified OR does not misclassify it as True. 13. System logs the content for fact-checker review.
Wrap Up	2. Fact-checker verifies the classification result.

Table 2.10 AI-Based News Classification – Exception Flow Test Procedure

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

2.11 Test Procedure (Multi-Language Reporting – F006)

Prior to execution of the following test procedures, these special requirements must be prepared:

- i. MySebenarnya System must be in “On” state
- ii. MySebenarnya System must be in “Idle” state

Test Procedure ID	TP-06-001
Objective	Verify generation of reports in multiple supported languages.
Test Cases to be Executed	TC-06-001, TC-06-002, TC-06-003, TC-06-004, TC-06-005, TC-06-006, TC-06-007, TC-06-008
Set up	- Admin accesses Reporting Module. - Admin selects report language (English, Malay, Mandarin). [TC-06-001] - System generates report in selected language. - Admin switches language preference. [TC-06-003] - System regenerates report accordingly. - System displays translated report content accurately.
Wrap Up	Admin verifies report content correctness.

Table 2.11 Multi-Language Reporting Test Procedure

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

2.12 Test Procedure (Multi-Language Reporting – Incorrect / Exception Flow)

Test Procedure ID	TP-06-002
Objective	Verify system behavior when report generation fails or language resources are unavailable.
Test Cases to be Executed	TC-06-004, TC-06-006
Set up	- Admin requests report generation in a selected language. - System fails to load language resource files. - System is unable to generate report in selected language. - System displays fallback language or error message. - System logs reporting failure.
Wrap Up	Admin verifies fallback or error handling.

Table 2.12 Multi-Language Reporting – Exception Flow Test Procedure

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

2.13 Test Procedure (User Submission – F007)

Prior to execution of the following test procedures, these special requirements must be prepared:

- i. MySebenarnya System must be in **“On”** state
- ii. MySebenarnya System must be in **“Idle”** state
- iii. User must be logged in as a **Registered User**

Test Procedure ID	TP-07-001
Objective	Verify that registered users can successfully submit news content and that valid submissions are correctly validated, stored, and linked to the user account profile.
Test Cases to be Executed	TC-07-001, TC-07-002, TC-07-003, TC-07-004, TC-07-005
Set up	1. User logs into the system as a registered user. 2. User clicks the “Submit News” button. 3. User enters valid readable news content. [TC-07-001] 4. User submits empty news content. [TC-07-002] 5. User submits unreadable or random character content. [TC-07-003] 6. User submits news content below minimum length. [TC-07-004] 7. User submits news content exceeding maximum length. [TC-07-005] 8. System validates the submitted news content. 9. System stores valid submissions and links them to the user’s account. 10. System rejects invalid submissions and displays appropriate error messages.
Wrap Up	1. Tester verifies submission storage, validation behavior, and user-submission linkage.

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

	2. Any submission error or data inconsistency is recorded in the Test Incident Report.
--	--

Table 2.13 User Submission – Main Flow Test Procedure

2.14 Test Procedure (User Submission – Incorrect / Exception Flow)

Test Procedure ID	TP-07-002
Objective	Verify system behavior when user submission input is invalid, empty, unreadable, or exceeds allowed constraints.
Test Cases to be Executed	TC-07-002, TC-07-003, TC-07-004, TC-07-005
Set up	1. User logs into the system. 2. User clicks the “Submit News” button. 3. User submits empty submission content. [TC-07-002] 4. User submits unreadable or meaningless content. [TC-07-003] 5. User submits content below minimum length or above maximum length. [TC-07-004][TC-07-005] 6. System detects invalid input. 7. System rejects the submission. 8. System displays validation error message. 9. The system does not store invalid submission.
Wrap Up	1. Tester confirms rejection behavior and verifies no invalid data is stored. 2. Any anomaly is logged in the Test Incident Report.

Table 2.14 User Submission – Exception Flow Test Procedure

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

2.15 Test Procedure (Fact-Checker Verification Workflow – F008)

Prior to execution of the following test procedures, these special requirements must be prepared:

- i. MySebenarnya System must be in “**On**” state
- ii. MySebenarnya System must be in “**Idle**” state
- iii. Submission must exist in the system
- iv. User must be logged in as an **Authorized Fact-Checker**

Test Procedure ID	TP-08-001
Objective	Verify that fact-checkers can verify submissions, update reputation scores, enforce warnings or suspensions, and trigger automated alerts.
Test Cases to be Executed	TC-08-001, TC-08-002, TC-08-003, TC-08-004, TC-08-005
Set up	1. Fact-checker logs into the system. 2. Fact-checker accesses submitted news content. 3. Fact-checker verifies submission as True. [TC-08-001] 4. System updates user reputation score positively. 5. Fact-checker verifies submission as False. [TC-08-002] 6. System increments false submission count. 7. System updates user reputation score negatively. 8. System checks violation thresholds. 9. System issues warning when threshold is reached. [TC-08-004] 10. System suspends user account when suspension threshold is reached. [TC-08-005] 11. System sends automated alert notification to the user.
Wrap Up	1. Tester verifies reputation updates, enforcement actions, and alert notifications. 2. Any enforcement or notification failure is recorded in the Test Incident Report.

Table 2.15 Fact-Checker Verification Workflow – Main Flow Test Procedure

Project Title: SeBenarnya.my Independent Verification and Validation		SeBenarnya.my 
Date: 4 January 2026	Test Design Specification ID: SeBenarnya_TPS_1.0.0	

2.16 Test Procedure (Fact-Checker Verification Workflow – Exception Flow)

Test Procedure ID	TP-08-002
Objective	Verify system behavior when fact-checker verification fails due to unauthorized access or enforcement logic errors.
Test Cases to be Executed	TC-08-003
Set up	1. Unauthorized user attempts to access fact-checker verification module. 2. System denies verification access. 3. System displays authorization error message. 4. System does not update submission status or user reputation. 5. System logs unauthorized access attempt.
Wrap Up	1. Tester verifies access control enforcement and security logging. 2. Any violation or failure is recorded in the Test Incident Report.

Table 2.16 Fact-Checker Verification Workflow – Exception Flow Test Procedure
